

# Bionics Institute Seminar

Commercialising biotech is just a series of steps: why make it sound so hard?

**Dr. Erol Harvey**

Strategic advisor to the Bionics Institute,  
Director of MiniFAB (Aust) Pty Ltd

There are huge commercial opportunities in biotech - the commercialisation of medical and engineering research to produce new devices and services that bring real benefit people. This talk will introduce the principles for medical device development, take a gentle walk through some of the jargon, and show how this can be effectively built into the process of research and development and (using yet more current jargon), enable research translation to generate impact

Scientist, educator and entrepreneur Dr. Erol Harvey has made significant contributions to Australia through his world-leading export-oriented microfluidic engineering company MiniFAB, his distinguished academic career and his unwavering support for research commercialisation and entrepreneurship.

**Friday 5<sup>th</sup> October at  
4pm Mollison House**
